

What Makes the Personal Protective App Different?

We didn't develop the Personal Protective App (PPA) because we could, we did it because it was requested by our clients. As the reality of the pandemic set in, users of our operations software MESH asked us if we would build them a solution to help manage new health and safety protocols and COVID-19 employee screening.

The solution matured into its own stand-alone health and safety platform, the Personal Protective App, helping hundreds of organizations manage their workforces throughout the uncertainty and complexity of the past year.

An Ever-Evolving Platform

Since its launch, the PPA platform has continuously evolved in response to the changing needs of workplaces in healthcare, education, manufacturing and more, across all of North America. We are constantly updating with an improved user experience in mind, and adding increased capabilities in response to regulatory changes and user feedback including:

- ✓ Vaccine & Influenza Tracking
- ✓ COVID-19 Test Result Tracking
- ✓ Attendance & Capacity Tracking
- ✓ Employee and Visitor Screening
- ✓ Detailed, Easy to Navigate Reporting
- ✓ Enterprise Integrations
- ✓ Best-in-Class Security and Data Protection
- ✓ Dedicated Implementation & Customer Support Teams
- ✓ Temperature Checks

"In the COVID era, we were looking for a reliable partner that could ease our employees back into our workplace with their safety and health being most important. We were starting with no previous experience and needed a supportive partner. We chose the PPA app due to the easy ability to understand and implement! Made for a very easy decision."

- Elizabeth Howard, Second City

High Security & Privacy Standards

Powered by Microsoft Azure's industry-leading security and compliance solution, you can be confident that your organization's data is protected. PPA is hosted on Microsoft's Azure cloud infrastructure, which allows us to deliver scalable, available, and fault-tolerant security services.

The PPA platform leverages Azure's strong geo-redundancy, replication, and recovery options, and follows Microsoft recommended best practices. Azure meets a broad set of international and industry-specific security, privacy, and compliance standards including ISO 27001, HIPAA, FedRAMP, SOC 1, and SOC 2. We take your privacy seriously.

Unrivaled Customer Support

Providing excellent customer service is a part of Go Evo's DNA. Our implementation specialists will walk you through every step of the quick and easy roll-out process making sure you are completely comfortable with the app before launching it to all users.

All of our clients also have access to our dedicated support portal. There you will find a library of support articles and be able to connect with our live support team. Our goal is to ensure one of our experts is always only a click away.

"As an administrator, I received quick, courteous, and helpful support from the Go Evo support team when I had some specific questions. I would certainly recommend this app and the Go Evo company to anyone who is seeking a COVID-19 workplace screening app."

- Cheryl Farris Manning, Children's Aid Society

About

GOEVO

Go Evo's Personal Protective App was developed in early 2020, leveraging their existing operations management system MESH, to respond to the immediate screening needs by employers across North America. The updated Personal Protective App is a simple, affordable way for organizations to keep their employees safe while protecting individual privacy and improving operational processes.

4+
